DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

_____

1. What parts of encapsulating your logic were easy?

Working with the code in smaller snippets rather than longer code.

_____

2. What parts of encapsulating your logic were hard?

Having to change old code, I think it would be easier to do as you type up new code rather than working with code that already has a purpose.

_____

3. Is abstracting the book preview a good or bad idea? Why?

Good, it makes the code easier to maintain, more readable and cancels out the need for repetition in the code by calling a function when the code is needed.
